A LINE OF LITTLE FARMS

Santiago de Cuba, May 7.-Colonel Whitside, commanding the department of Santiago and Puerto Principe, returned from his first inspection of the southern portion of his department. The object of the inspection was more to see the condition of the people and obtain suggestions as to their needs. Near Manzanillo are located five prosperous sugar plantations which have

produced this season over 22,000,000 pounds of sugar. This is a small fraction of the capacity of these plantations, all of which are preparing to plant large areas of cane this year. All the operating plantations on the Manzanillo coast are owned by Americans and

From Manzanillo Colonel Whitside went by ambulance to Bayamo, the historic old ruins founded in 1521, once a city of 30,000 people, now inhabited by probably 6,000 persons and garrisoned by one troop of the Tenth cavalry. The road is an excellent one at this season of the year and has been greatly improved by the Americans. It passes through the richest agricultural

portion of the province. Now the road is skirted by a continnous line of little farms and filled with Cubans carrying fruits and vegetables to the market. The tobacco crop is immense, considering the time since the floods. It is estimated that 126,-000 pounds will be marketed this summer at Manzanillo. No government aid whatever is given or needed, except employment upon public works which are being pushed by the officers of the Tenth regiment.

Two large schooners were being loaded with mahogany and cedar logs for European ports. Immense quantities of these valuable woods are shipped from Manzanillo, having been hauled for leagues by oxen to the port, or floated down the Cauta river from the remote interior.

A Bird's Nest of Steel.

The Ornithological museum of Salothurn, Switzerland, has come into possession of a bird's nest which is extremely unique. It is a swallow's nest, about four inches broad, built entirely of steel watch springs. It was discovered by a workman in one of the big watch factories of that country, who last summer had often seen a swallow fly into the open workshop, pick up a bit of metal and fly off to a neighboring tree. After the young birds had flown away to warmer lands he climbed the tree and found to his astonishment that the nest was composed entirely of discarded watchsprings, but that it was nevertheless quite soft and light in weight.
